Eric Huang

SENIOR SITE RELIABILITY ENGINEER

Senior SRE with 5+ years of experience specializing in the reliability and scalability of high-concurrency distributed systems. Skilled in Go and Python, with a proven track record of optimizing high-throughput observability pipelines and architecting GPU-accelerated infrastructure. CKA and Grafana Champion.

WORK EXPERIENCE

Sr. Site Reliability Engineer Engineering Dept., LINE Taiwan

Sep 2025 – Present · Taipei, Taiwan

- Co-created and maintain the Flava Terraform provider, **adopted by internal Flava IaC orchestration**; review Terda community contributions and collaborate with Flava product teams on officially supported resources.
- Created and architected the Go SDK adopted as the official SDK for the Flava Terraform provider and used by Flava CLI plugins, unifying access to **30+** cloud services through shared authentication, service discovery, and automated client generation.
- Designed and implemented a dual-write pipeline for migrating Loki from Verda to Flava, using Vector DaemonSets to send logs to the existing cluster and Kafka, with managed Vector consumers buffering delivery to the target cluster to smooth ingestion spikes.
- Built a Go-based secrets integration toolkit for Kustomize, Argo CD, and GitHub Actions, adopted across **10** teams, enabling deployment-time secret retrieval and KMS-backed decryption to keep plaintext secrets out of Git.

Site Reliability Engineer Engineering Dept., LINE Taiwan

Dec 2022 – Sep 2025 · Taipei, Taiwan

- Designed and optimized high-throughput observability pipelines for terabyte-scale telemetry data, achieving a **300% increase** in ingestion performance through pipeline refactoring and Loki configuration tuning.
- Co-maintained the organization-wide internal Terraform provider Terda and its community as part of a volunteer group. Pioneered Terda adoption at LINE Taiwan and actively advocated for Terraform usage.
- Implemented a Grafana Alloy gateway to distribute large volume client-side telemetry data sent by Faro SDK, enabling real user monitoring (RUM) and correlating frontend apps with existing observability solutions.

Senior Engineer Intelligent Banking Division, E.SUN Bank

May 2021 – Dec 2022 · Taipei, Taiwan

- Designed and built a robust monitoring/alerting system that collected **15+ GB** of metrics daily across **100+ servers**.
- Engineered **production-grade**, **GPU-accelerated** Kubernetes clusters for AI workloads; optimized hardware-software integration by contributing upstream fixes to Kubespray to improve cluster reliability

PROJECTS

Rust Playground with WASM

- Delivered a full-stack solution for the Rust Playground, enabling interactive WebAssembly rendering in the browser and integrated it into mdBook.

Court Reserver

- Developed a Rust CLI program for Taipei Metropolitan court reservations, enabling concurrent reservations to avoid manual operations on apps.

SKILLS

Programming

Python • Go • Rust

Technologies

Kubernetes • Containerization • Linux SysAdmin • TCP/IP • Observability • ArgoCD

IaC, CI/CD

GitHub Actions • Terraform • Ansible

EDUCATION

MEng Data Science

2018 – 2020 · National Chiao Tung Univ.

BSc Computer Science

2014 – 2018 · Yuan Ze Univ.

TALKS & ARTICLES

- Upgrading Loki with a Canary Deployment @ COSCUP 2025,
- Grafana Alloy Best Practice @ COSCUP 2024,
- The Journey to the Kubernetes metrics @ K8s summit 2021,
- [transl.] Terraform for Verda - A journey of Infrastructure as Code for our private cloud
- The Journey to the Kubernetes Networking
- Auto Differentiation
- Buddy System

CONTRIBUTIONS

Enhanced VRL Functions and Vector Components

vectordotdev/vrl, vectordotdev/vector

Support JSON-RPC in Go uprobe eBPF Instrumentation

open-telemetry/opentelemetry-ebpf-instrumentation

Reduced Redundant Calculations in Backpropagation

pytorch/pytorch, jax-ml/jax
