Eric Huang

Senior Site Reliability Engineer

Building reliable distributed systems with 5+ years of experience in observability, Kubernetes, and cloud infrastructure. Develops Go tooling adopted across teams and optimizes terabyte-scale telemetry pipelines. Certified Kubernetes Administrator (CKA) and Grafana Champion.

WORK EXPERIENCE

Sr. Site Reliability Engineer Engineering Dept., LINE Taiwan

Sep 2025 – Present · Taipei, Taiwan

- Co-created and maintain the Flava Terraform provider, **adopted by internal Flava IaC orchestration**; review Terda community contributions and collaborate with Flava product teams on officially supported resources.
- Created and architected the Go SDK adopted as the official SDK for the Flava Terraform provider and used by Flava CLI plugins, unifying access to **30+** cloud services through shared authentication, service discovery, and automated client generation.
- Designed and implemented a dual-write pipeline for Loki migration from Verda to Flava, using Vector agents to maintain ingestion into the existing cluster while feeding a Kafka-backed, stream-based topology for the target cluster, buffering delivery through Vector consumers to smooth ingestion spikes.
- Built a Go-based secrets integration toolkit for Kustomize, Argo CD, and GitHub Actions, adopted across **10** teams, enabling deployment-time secret retrieval and KMS-backed decryption to keep plaintext secrets out of Git.

Site Reliability Engineer Engineering Dept., LINE Taiwan

Dec 2022 – Sep 2025 · Taipei, Taiwan

- Designed and optimized high-throughput observability pipelines for terabyte-scale telemetry data, achieving a **300% increase** in ingestion performance through pipeline refactoring and Loki configuration tuning.
- Co-maintained the organization-wide internal Terraform provider Terda and its community as part of a volunteer group. Pioneered Terda adoption at LINE Taiwan and actively advocated for Terraform usage.
- Implemented a Grafana Alloy gateway to distribute large volume client-side telemetry data sent by Faro SDK, enabling real user monitoring (RUM) and correlating frontend apps with existing observability solutions.

Senior Engineer Intelligent Banking Division, E.SUN Bank

May 2021 – Dec 2022 · Taipei, Taiwan

- Designed and built a robust monitoring/alerting system that collected **15+ GB** of metrics daily across **100+ servers**.
- Engineered **production-grade**, **GPU-accelerated** Kubernetes clusters for AI workloads; optimized hardware-software integration by contributing upstream fixes to Kubespray to improve cluster reliability

PROJECTS

Rust Playground with WASM

- Delivered a full-stack solution for the Rust Playground, enabling interactive WebAssembly rendering in the browser and integrated it into mdBook.

Court Reserver

- Developed a Rust CLI program for Taipei Metropolitan court reservations, enabling concurrent reservations to avoid manual operations on apps.

SKILLS

Programming

Python • Go • Rust

Technologies

Kubernetes • Containerization • Linux SysAdmin • TCP/IP • Observability • ArgoCD

IaC, CI/CD

GitHub Actions • Terraform • Ansible

EDUCATION

MEng Data Science

2018 – 2020 · National Chiao Tung Univ.

BSc Computer Science

2014 – 2018 · Yuan Ze Univ.

TALKS & ARTICLES

- Upgrading Loki with a Canary Deployment @ COSCUP 2025,
- Grafana Alloy Best Practice @ COSCUP 2024,
- The Journey to the Kubernetes metrics @ K8s summit 2021,
- [transl.] Terraform for Verda - A journey of Infrastructure as Code for our private cloud
- The Journey to the Kubernetes Networking
- Auto Differentiation
- Buddy System

CONTRIBUTIONS

Enhanced VRL Functions and Vector Components

vectordotdev/vrl, vectordotdev/vector

Support JSON-RPC in Go uprobe eBPF Instrumentation

open-telemetry/opentelemetry-ebpf-instrumentation

Reduced Redundant Calculations in Backpropagation

pytorch/pytorch, jax-ml/jax
